

TrueNute Calcium Sulfate

Thank you for your purchase of

TrueNute Calcium Sulfate!

The idea is to get your calcium level to 30-100 PPM. The easiest way to do this is to purchase the test kit we list on the page where you bought this product.

When adding calcium sulfate, start slow, keep notes of what you added along with the test results before and after you add each time. For 100 gallons, you will add 1.75 ounces to start with. If you have 0PPM calcium in your system, that will get you up to 30 PPM. After you add TrueNute Calcium Sulfate, wait several hours before you test to allow the mineral to move throughout the system.
