

TrueNute Veg & Flower Kit

Thank you for your purchase of

TrueNute's Veg & Flower Kit

You need to pick a certain day of the week to add your Veg or Flower kits. Just cut open the correct packet and dump it into your water where it can mix well with all water in your system. All packages are marked with the label for "Veg or Flower" and "1-6" depending on which kit you purchased. Each bag supply's enough minerals for your basic grow for 2 weeks. You can double up your doses of veg or flower, but it is cheaper to just buy a kit for a larger system. You will use the "Vegetative Growth" bags first, one bag every two weeks. You will then switch to the "Flower & Fruiting" mix, one ever two weeks until it is all used. Follow the chart below for when to add what, including the "TrueNute Micro Nutrient Mix". Do not double up the Micro Nute Mix, as it can be dangourous for the system. Be sure to use system water to rinse the micro nute packs out into the system.

Please let us know how your grow does using TrueNute's Veg & Flower Kit.

If you have any questions, email us
