

TrueNute Manganese

Thank you for your purchase of **TrueNute Manganese!**

It takes very little Manganese Sulfate for your system.
For 100 gallons add 0.12 grams to bring your PPM up by 0.1 PPM in 100 gallons. Very potent stuff, so you need a very good scale to measure it out. We can premeasure out what you need, we just have to charge for the extra labor.

It is best to have your water and plants tested on a regular basis to insure your Manganese levels are correct.

If you need help,
