

TrueNute Seaweed Extract

Thank you for your purchase of
TrueNute Seaweed Extract!

For new and mature aquaponics systems alike, mix 0.1 ounces per 100 gallons of system water per week.

For 1000 gallons that would be 1 ounce per week.

If you prefer to mix it with water first in a one-gallon jug, add 3.25 ounces into the one-gallon jug, shake well before using, and then add about 4 ounces of the mix to 100 gallons of system water. Adjust dosage for system size.

Seaweed extract will color your water dark for a few days, this is normal. It will then clear back up.

You can also spray the mix on plants from your one-gallon mix. Use 2 ounces of the mix in a one-gallon sprayer and spray the tops and bottoms of leaves.

Never spray plants when direct light will get on the plants while wet.
