

TrueNute Three Week Nutrient Dose

The True Aquaponics “**TrueNute Three Week Nutrient Dose**” is designed to add the most common nutrients that are lacking in your Aquaponic system and last for three weeks. It is one full treatment for your system custom mixed for your system size. Allow 7 to 10 days from treatment to see a full effect in your plants. Some leaves may not recover from the damage they might have had before treatment. In each Three Week Dose is the proper amounts of Iron chelate, potassium sulfate and magnesium sulfate. **It is intended to be added every three weeks for the best results.**

To dose your system, simply cut the package open and dump the contents into your system at a good mixing point for the entire system. Though the contents will not harm your fish, we try to introduce it at a point just after the fish tank so as not to stress them. You can also mix with water before adding to the system, but do not allow it to set more than a few hours after wet.
