

TrueNute Mono Potassium Phosphate

Thank you for your purchase of

TrueNute Mono Potassium Phosphate!

You will want to get a test kit for Phosphate so that you can track the phosphate levels. You are shooting for 25 PPM of phosphate. For 1000 Gallons, add 3 ounces to the system water to add 5PPM of phosphate to your water, this will also add 6.3PPM of potassium to your system. You want to keep your Potassium under 100PPM so that it does not become toxic to the plants.
