

TrueNute TREE Iron Chelate FeEDDHA 6%

Thank you for your purchase of
TrueNute TREE Iron Chelate FeEDDHA 6%!

Iron Deficiency in trees, shrubs, lawn grass and other plants is unsightly and unhealthy for the plants. True TREE Iron will correct this issue and have your tree, plant or grass looking great again. Keep in mind, this is not an overnight miracle treatment, it takes time. Your tree or shrub may even look as though it is getting worse before it shows signs of getting better.

To apply as a soil drench, simply add 2-4 tablespoons of the powder per gallon of water. Mix well and then pour it under the tree or shrub from the drip line to the trunk. Do this slowly to avoid runoff of the liquid. We recommend that you break up the dirt at the top of the ground 1 to 2 inches deep so that the iron mix will soak into the ground. Repeat this watering process every three weeks, even in fall and winter if the ground is not frozen. Trees still uptake minerals while they appear to be dormant, and will do better in the spring if this is done.

It is recommended that you do not spill the liquid or powder on a surface such as wood decking or concrete, as it will stain the surface.
